EDUCATION

Georgia Institute of Technology

Jan. 2025 – Dec. 2026

M.S. Computer Science, Specialization: Artificial Intelligence

University of California - Los Angeles

Aug. 2019 – Jun. 2023

B.S. Computer Science, Dean's Honor List 2020

WORK EXPERIENCE

Amazon Music

May 2026 – Aug. 2026

Software Engineer Intern

Los Angeles, United States

- Owned the end-to-end product design and development of a card-swiping artist discovery experience, delivering a prototype that recommends artists from 10K-artist pool tailored to user's existing follows
- Engineered a dynamically resizing card stack serving 20–30 artist recommendations per session
- Optimized card population to achieve sub-150 ms and below 5 ms for a responsive swiping experience

Amazon Music

May 2025 – Aug. 2025

Software Engineer Intern

Los Angeles, United States

- Built foundational flow on Android to display AMU benefits, targeting users based on subscription status and 30-day playback history
- Refactored GraphQL query and caching logic with only ~15ms latency added while handling race conditions
- Designed and implemented a splash page using React Native, highlighting AMU benefits to 10M+ customers

SOLiDVUE

Aug. 2024 – Nov. 2024

Software Engineer Intern

Seongnam, South Korea

- Developed a SPAD model in Python, achieving 98% accuracy in LiDAR distance sensors in vehicles
- Expanded company's dataset by 3x through usage of snow and fog simulation on 3D point cloud data
- Incorporated noise-removing algorithms such as DROR, LIOR, and LIDSOR to remove effects of adverse weather on point cloud data by 96% accuracy

Intelligent & Resource-efficient Image Processing & Systems Design Lab (IRIS)

Jun. 2021 – Sept. 2021

Software Research Lab Intern

Suwon, South Korea

- Led in-depth research in deep learning algorithms for image classification and localization through usage of TensorFlow to construct dense and sequential AI models on Oxford Pet Dataset
- Attained an 95.2% accuracy in image classification and achieved a loss metric of 0.0435 in image localization
- Resolved 50+ crucial errors in research papers across teams, improving quality to meet publication standards

PROJECTS

Space Dash | UCLA

Mar. 2023

- Proposed and led development of Temple Run-style game in 2 weeks, coding 2,000+ lines in JavaScript and WebGL to implement dynamic road generation, 10+ flying asteroid, and 50+ unique perks and lighting effects

Arduino iPod | IEEE

Dec. 2019

- Secured 2nd place in IEEE Open Project Space competition by developing an Arduino-based iPod system

SKILLS & CERTIFICATIONS

- C-Language: C/C++ (Proficient), Java (Proficient), Python (Proficient), JavaScript, HTML, CSS, React Native
- Tools: Git, Shell, Visual Studio, XCode, Android Studio, Eclipse, WebStorm, AWS, NodeJS
- Languages: English (Native), Korean (Native), Spanish, Japanese
