EDUCATION

University of Southern California

Aug. 2024 – May 2026

M.S. Computer Science

University of California - Los Angeles

Aug. 2019 – Jun. 2023

B.S. Computer Science, Dean's Honor List 2020

Relevant Coursework Completed:

- Artificial Intelligence | Machine Learning | Computer Graphics | Programming Languages | Advanced C++ Programming | Algorithms & Complexity | Computer Network | Operating System Principle | Digital Design Lab | Software Construction Laboratory | Logic Design of Digital Systems | Computer Organization

WORK EXPERIENCE

SOLiDVUE

Aug. 2024 – Nov. 2024

Software Engineer Intern

Seongnam, South Korea

- Developed a SPAD model in Python, achieving 98% accuracy in LiDAR distance sensors in vehicles
- Expanded company's dataset by 3x through usage of snow and fog simulation on 3D point cloud data
- Incorporated noise-removing algorithms such as DROR, LIOR, and LIDSOR to remove effects of adverse weather on point cloud data by 96% accuracy

Intelligent & Resource-efficient Image Processing & Systems Design Lab (IRIS)

Jun. 2021 – Sept. 2021

Software Research Lab Intern

Suwon, South Korea

- Led in-depth research in deep learning algorithms for image classification and localization through usage of TensorFlow to construct dense and sequential AI models on Oxford Pet Dataset
- Attained an 95.2% accuracy in image classification and achieved a loss metric of 0.0435 in image localization
- Resolved 50+ crucial errors in research papers across teams, improving quality to meet publication standards

AIFA (AI For All, startup)

Oct. 2020 – Jun. 2021

Founder, Software Developer

San Diego, CA

- Initiated an AI-driven tutoring startup to deliver personalized learning with PyTorch, leveraging teaching experience and data size of approximately 200 from Summit Tutoring Center
- Derived concept from a notable success in student's exam score, from 50% to 97%, after 1 week of personal class, underscoring potential impact of personalized learning

PROJECTS

Space Dash | UCLA

Mar. 2023

- Proposed and led development of Space Dash in 2 weeks, a Temple Run-inspired game set in outer space where players must dodge 10+ flying asteroids while running through an endless track
- Built with 2,000+ lines of JavaScript and WebGL, implementing dynamic road generation along with object creation of character model, 3 perks, 20 asteroids, and 50+ unique lighting effects

Arduino iPod | IEEE

Dec. 2019

- Secured 2nd place in IEEE Open Project Space competition by developing an Arduino-based system, allowing users to choose between 3 manually translated songs

SKILLS & CERTIFICATIONS

- C-Language: C/C++ (Proficient), Java (Proficient), Python (Proficient), Verilog, JavaScript, HTML, CSS
- Tools: Git, Shell, Visual Studio/XCode, Eclipse, Webstorm, AWS, Windows OS, NodeJS
- Languages: English (Native), Korean (Native), Spanish, Japanese
